REVA PETHE
pethe.r@northeastern.edu | 857-300-0698 | LinkedIn | Boston, MA

PROFESSIONAL SUMMARY

Data Engineer experienced in Python, SQL, PySpark, AWS Glue, S3, and Databricks, building ETL pipelines that transform raw data into reliable, analytics-ready datasets. Skilled in dimensional modeling, PostgreSQL, data validation, pipeline monitoring, and automated reporting.

EDUCATION

Northeastern University, Boston, MA **Sep 2024 – Aug 2026**
Masters in Information Systems
Coursework: Data Management and Database Design, Application Engineering and Development, Business Analytics, Web Design and User Experience, Algorithms, Data Science

TECHNICAL SKILLS

Programming Languages : Python, SQL (joins, CTEs, window functions, query optimization), PySpark, R
Data Processing & Analytics : Databricks, Pandas, NumPy, Power BI, Tableau, Advanced Excel, Scikit-learn, Jupyter Notebook, Data Validation, Data Transformation
Databases & Modeling : PostgreSQL, MySQL, SQL Server, Snowflake, MongoDB, Dimensional Modeling, Data Warehousing
Cloud & Pipelines: AWS (S3, Glue), Databricks, ETL/ELT Development, Apache Airflow, Docker, CI/CD, REST APIs
Core Competencies: Batch Data Pipelines, Data Quality, Schema Validation, SQL Optimization, Data Modeling

PROFESSIONAL EXPERIENCE

MindShare | Data Analyst | Boston, MA **Jan 2026 – May 2026**
- Built Python and SQL data pipelines for 50,000+ voice-command and purchase-order records, transforming raw speech transcripts into query-ready tables and reducing preprocessing by 30%.
- Developed a Python, NLP, and speech-recognition workflow that converted spoken approvals into validated purchase orders, improving command recognition accuracy by 20%.
- Added schema checks, logging, and pipeline monitoring to the voice-approval workflow to identify malformed records and improve reliability of procurement reporting data.
- Integrated REST APIs and backend services to transfer approved purchase-order data between voice processing, databases, and downstream procurement applications.

Symbiosis | Data Engineer | India **May 2023 – Jun 2024**
- Developed PySpark and SQL pipelines in Databricks to consolidate visitor surveys, bookings, and regional tourism research into curated analytics-ready tables.
- Optimized AWS S3, Glue, and Databricks ingestion and transformation workflows, partitioning tourism data by region and season to reduce daily processing time by 25%.
- Designed PostgreSQL fact and dimension tables for visitor volumes, bookings, and seasonal revenue, supporting consistent queries and downstream reporting.
- Worked with researchers and analysts to translate tourism reporting requirements into curated data marts and Power BI dashboards, reducing manual data requests.

KEY PROJECTS

AI-Powered Payroll Analytics | **GitHub** | **Demo** | *Python, PostgreSQL, ETL, dbt* **Jun 2026**
- Built an ETL pipeline in Python to load 50,000+ employee records across USA and India into PostgreSQL and Snowflake, standardizing salary, department, and location fields.
- Modeled payroll tables with dbt and built a natural-language layer that converted business questions into dynamic SQL queries, enabling self-service analysis.

Predictive Modeling of Healthcare Cost | **GitHub** | **Demo** | *Python, Scikit-learn, Pandas, CI/CD* **Jan 2026**
- Built a Python preprocessing pipeline over healthcare records covering data cleaning, schema validation, and feature engineering to produce reproducible model-ready datasets.
- Developed an interactive Streamlit application serving XGBoost and Random Forest models, using Git version control and CI/CD to automate testing and deployment.

US Masters Admission Prediction App | *Random Forest, Excel, Power BI* **Sep 2025**
- Ingested and transformed US applicant profiles using MySQL and Python, applying SQL-based feature engineering to prepare consistent admission modeling data.
- Automated Python/Pandas data cleansing and validation, publishing curated datasets to Power BI dashboards for admission-trend reporting.

CERTIFICATIONS AND PUBLICATIONS

- **Certifications**: Data Analytics (Google Cloud, Deloitte), SQL & Machine Learning (LinkedIn), Python Programming (Udemy)
- **Publication**: "Ambition: US Masters Prediction Using Predictive Analytics" - METSZET Journal, Vol. 8, Issue 11, Nov 2025
